## Symbols and Abbreviations

The following symbols and abbreviations, and others approved for the Système International d'Unités (SI), are used without definition in the following reports by the Divisions of Sport Fish and of Commercial Fisheries: Fishery Manuscripts, Fishery Data Series Reports, Fishery Management Reports, and Special Publications. All others, including deviations from definitions listed below, are noted in the text at first mention, as well as in the titles or footnotes of tables, and in figure or figure captions.

<b>Weights and measures (metric)</b>		<b>General</b>	<b>Measures (fisheries)</b>	
centimeter	cm	Alaska Administrative	fork length	FL
deciliter	dL	Code	mideye-to-fork	MEF
gram	g	all commonly accepted	mideye-to-tail-fork	METF
hectare	ha	abbreviations	standard length	SL
kilogram	kg		AM, PM, etc.	TL
kilometer	km	all commonly accepted		
liter	L	professional titles	e.g., Dr., Ph.D.,	<b>Mathematics, statistics</b>
meter	m		R.N., etc.	<i>all standard mathematical signs, symbols and abbreviations</i>
milliliter	mL	at	@	
millimeter	mm	compass directions:		
		east	E	alternate hypothesis
		north	N	base of natural logarithm
		south	S	catch per unit effort
		west	W	coefficient of variation
		copyright	©	common test statistics
		corporate suffixes:		(F, t, $\chi^2$ , etc.)
		Company	Co.	confidence interval
		Corporation	Corp.	correlation coefficient
		Incorporated	Inc.	(multiple)
		Limited	Ltd.	correlation coefficient
		District of Columbia	D.C.	(simple)
		et alii (and others)	et al.	covariance
		et cetera (and so forth)	etc.	degree (angular)
		exempli gratia		degrees of freedom
		(for example)	e.g.	expected value
	d	Federal Information		greater than
day		Code	FIC	greater than or equal to
degrees Celsius	°C	id est (that is)	i.e.	harvest per unit effort
degrees Fahrenheit	°F	latitude or longitude	lat. or long.	HPUE
degrees kelvin	K	monetary symbols		less than
hour	h	(U.S.)	\$, ¢	less than or equal to
minute	min	months (tables and		logarithm (natural)
second	s	figures): first three		logarithm (base 10)
		letters	Jan,...,Dec	logarithm (specify base)
				minute (angular)
				not significant
		registered trademark	®	NS
	AC	trademark	™	null hypothesis
ampere	A	United States		percent
calorie	cal	(adjective)	U.S.	probability
direct current	DC	United States of		probability of a type I error
hertz	Hz	America (noun)	USA	(rejection of the null
horsepower	hp	U.S.C.	United States	hypothesis when true)

November 2005

The Fishery Management Reports series was established in 1989 for the publication of an overview of Division of Sport Fish management activities and goals in a specific geographic area. Fishery Management Reports are intended for fishery and other technical professionals, as well as lay persons. Fishery Management Reports are available through the Alaska State Library and on the Internet: <http://www.sf.adfg.state.ak.us/statewide/divreports/html/intersearch.cfm>. This publication has undergone regional peer review.

1. Salmon weir locations in the Kodiak Management Area .....	231	

## ABSTRACT

In 2004, the Alaska Department of Fish and Game (ADF&G) operated 10 fish counting weirs in the Kodiak Management Area (KMA). Operation of these weirs began in mid May and continued through late September. Operation dates of each weir varied depending upon the run timing of salmon populations in the system. Sockeye salmon *Oncorhynchus nerka*, Chinook salmon *O. tshawytscha*, pink salmon *O. gorbuscha*, coho salmon *O. kisutch*, chum salmon *O. keta*, steelhead *O. mykiss*, and Dolly Varden *Salvelinus malma* were individually counted by field crews using hand held tally counters. This escapement data provided the basis for inseason management actions regulating the commercial, sport, and subsistence fisheries in the KMA.

A total of 4,778,002 salmon were counted through weirs in the KMA during 2004. This total consisted of 1,676,205 sockeye, 33,134 Chinook, 3,032,351 pink, 33,557 coho, and 2,746 chum salmon.

This report contains all KMA weir escapement counts that occurred in 2004 and provides total daily cumulative weir escapements between 2004 and the previous nine years for each system. The locations and brief descriptions of each weir are included to help familiarize the reader with the various systems.

Key words: Salmon, sockeye, Chinook, pink, coho, chum, escapement, weir.

## INTRODUCTION

Weir counts are critical for the management of commercial fisheries. If weir counts are not available aerial surveys are used to estimate the salmon escapement and to manage the fisheries. Escapement information provides the basis for biological integrity and inseason management actions that regulate commercial, sport, and subsistence harvest of salmon. Five species of Pacific salmon are enumerated: sockeye *Oncorhynchus nerka*, Chinook *O. tshawytscha*, pink *O. gorbuscha*, coho *O. kisutch*, and chum *O. keta*, as well as steelhead trout *O. mykiss* and Dolly Varden *Salvelinus malma*.

From 1995 to 2004 the number of weirs operating each year in the Kodiak Management Area (KMA) has fluctuated with available funding. New weirs are occasionally installed to address specific management or research concerns. The Little River weir was installed beginning in 2001 for a three-year escapement assessment study, comparing aerial surveys and on-site video observations to weir counts. A total of 10 weirs were operated in 2004 (Table 1). These included the Karluk, Ayakulik, Dog Salmon, Frazer, Upper Station, Buskin, Lake Louise, Litnik, Pauls Bay, and Malina Creek Weirs.

Operation of these weirs begins from mid May to early June and typically continues until late August to late September, depending upon the run timing of salmon populations into a particular system (Table 2). Fish are individually counted using hand held tally counters. Occasionally, estimates of escapement are required due to damage to the weir from high water or bear activity. These estimates are derived from foot surveys or extrapolations based on visual observations and daily escapements before and/or after the disturbance of the weir's integrity. Foot and aerial surveys are also used to estimate escapement before the weir is installed or after it is removed.

Most weirs operated on Kodiak, Afognak, and Shuyak Islands, are funded and operated by the Alaska Department of Fish and Game (ADF&G), Division of Commercial Fisheries. The Kodiak Regional Aquaculture Association (KRAA) provides funding to assist the operation of some weir projects through a cooperative agreement with ADF&G. The ADF&G, Division of Sport Fish, funds the Buskin weir. In past years the Alaska Department of Natural Resources (DNR), Division of State Parks, has operated one to two weirs on Shuyak Island, and the U.S. Fish and Wildlife Service (FWS) has funded and operated one to two weirs. Table 2 summarizes weir installation and removal dates for 1995 – 2004.

The reader should note that years not listed in the tables indicate that no escapement of that species occurred or the weir was not installed that year. Other reports (Kuriscak 2004) also list prior years escapements of species at weirs that were not operated in 2004.

## KODIAK MANAGEMENT AREA WEIRS

Weirs permit accurate identification and enumeration of adult salmon during their upstream spawning migration from saltwater to freshwater. Fish weirs are man-made structures that span the width of a river to impede upstream migration of fish. In the Kodiak Management Area weirs are made from a framework of wooden tripods (weighted with sandbags or large rocks), timbers, and a boardwalk. Aluminum panels, made of one-inch pipe spaced one inch apart, are placed on the upstream side of the weir framework creating a barrier to fish migration. Weirs are monitored throughout the day for salmon accumulating on the downstream side of the weir. Gates in the weir are then opened and fish are identified by species and counted as they travel upstream in their migration to their spawning grounds.

### KARLUK WEIR

The Karluk weir is approximately 101m (330') long and is located about 1.3km (four-fifths of a mile) upstream from the confluence of Karluk River and Karluk Lagoon, on the southwest side of Kodiak Island (Figure 1). The weir was first constructed in 1921 at its current location and was operated annually at this location until 1941. The weir was moved to "the portage," approximately 12.9km (eight miles) down river from the lake outlet, from 1942 to 1945. Between 1946 and 1975 it was operated at the outlet of Karluk Lake. It was re-established at its present location in 1976. It is operated by two to four ADF&G Commercial Fisheries employees from mid May to late September. ADF&G Sport Fish employees assist with weir operations during the Chinook run, until approximately July 15. Escapement counts for 2004 are listed in Table 3 and escapements by species from 1995-2004 are presented in Tables 13-19. The Karluk system has two distinct runs of sockeye salmon, the early run (prior to and including 15 July) and the late run (post 15 July).

### AYAKULIK WEIR

The Ayakulik weir is approximately 70m (230') long and is located about 1.3km (four-fifths of a mile) upstream of the outlet of the Ayakulik River into Shelikof Strait, on the southwest side of Kodiak Island (Figure 1). A weir was originally constructed on the Ayakulik River in 1929 at the outlet of Red Lake and operated until 1969. The weir has been in its current location since 1990. The weir is operated by two ADF&G Commercial Fisheries employees from late May to early September, with ADF&G Sport Fish assistance through mid July. Escapement counts for 2004 are listed in Table 4 and escapements by species from 1995-2004 are presented in Tables 20-26.

### DOG SALMON WEIR

The Dog Salmon weir consists of three weirs, 38m (125'), 41m (135') and 8m (25') in length on the three lower forks of Dog Salmon River 0.5 km (three-tenths of a mile) upstream of their outlets into Olga Bay. The Dog Salmon River system drains from the Frazer Lake system on the south end of Kodiak Island (Figure 1). First constructed in 1983, the weirs are usually operated by two ADF&G Commercial Fisheries employees from early June to early September. Escapement counts for 2004 are listed in Table 5 and escapements by species from 1995-2004 are presented in Tables 27-33.

## **FRAZER FISH PASS**

The Frazer Fish Pass consists of a diversion weir and a series of "fish ladders" which allow salmon to ascend a waterfall approximately 9m (30') tall, located near the outlet of Frazer Lake on the Dog Salmon River at the south end of Kodiak Island (Figure 1). Counts are made at the outlet of the fish pass. Constructed in 1962 to accommodate sockeye salmon stocks introduced in 1951 (Kuriscak 2004), the fish pass is operated by two KRAA funded ADF&G Commercial Fisheries employees from mid May to mid August. Frazer Lake sockeye salmon are first counted through the Dog Salmon weirs in order to manage commercial fisheries in the Alitak Bay district. The salmon are then counted again for a final count as they exit the fish pass into Frazer Lake. Escapement counts for 2004 are listed in Table 6 and escapements by species from 1995-2004 are presented in Tables 34-37.

## **UPPER STATION WEIR**

The Upper Station Weir is approximately 11m (35') long and is located near the outlet of Olga Creek into upper Olga Bay, on the south end of Kodiak Island (Figure 1). The weir was first constructed in 1929 just above the lagoon, about .23 km (one-seventh of a mile) above its current location and was operated there until 1969. From 1969 to 1993 the weir was operated near the outlet of lower Olga Lake, and then moved to its current location in 1993. The weir is operated by two ADF&G Commercial Fisheries employees from late May to mid September. Escapement counts for 2004 are listed in Table 7 and escapements by species from 1995-2004 are presented in Tables 39-44. The Upper Station system has two distinct runs of sockeye salmon, the early run (prior to and including 15 July) and the late run (post 15 July).

## **AKALURA WEIR**

The Akalura Weir is approximately 18m (60') long and is located about 1.3km (four-fifths of a mile) upstream from the confluence of Akalura Creek and Akalura Lagoon, on the south end of Kodiak Island (Figure 1). First constructed in 1923, this weir has not been operated on a consistent annual basis. It is manned by one to two state funded ADF&G Commercial Fisheries employees from late May to late September; however, in 2002 it was predominantly operated by a FWS employee.

In 2002, a three-year pilot project was implemented cooperatively between the ADF&G and the Kodiak FWS / National Wildlife Refuge (NWR). This research project utilized an unmanned video camera and time lapse recording technology to estimate escapement into this system. The Remote Video Escapement Recorder (RVER) is mounted on a tower and records images of migrating adult salmon for later enumeration. Results from this project compare escapement from the RVER system against counts obtained from the weir (Sagalkin 2003). Due to lack of funding this project was eliminated in 2004. Escapements by species from 1995-2004 are presented in Tables 45-50.

## **SALTERY WEIR**

The Saltery Weir is approximately 37m (120') long and is located about 0.4km (one-quarter of a mile) below the outlet of Saltery Lake, on the northeast side of Kodiak Island. It has been operated annually at this location since 1988 (Figure 1). A weir was first installed in 1985 and during the first three years of operation it was placed in various locations closer to the lagoon. These sites were abandoned due to problems with an unstable and shifting riverbed. The weir is usually operated by one ADF&G Commercial Fisheries employee from early June to early August. KRAA

employees operate the weir through mid September. Due to lack of funding this project was eliminated in 2004. Escapements by species from 1995-2004 are presented in Tables 51-57.

### **BUSKIN WEIR**

The Buskin Weir is approximately 38m (125') long and was first constructed in 1985 approximately 1.6km (1 mile) above the outlet of the Buskin River, which flows into Chiniak Bay, on the northeast side of Kodiak Island (Figure 1). In 1993, a 33m (109') weir was constructed at the outlet of Buskin Lake, approximately 6.4km (four miles) above the lower weir site. This location was chosen to avoid the frequent washouts that occurred at the lower site, so that a more accurate sockeye salmon count could be made from late April through late July. The weir is operated by two ADF&G Sport Fish employees from August 15 to early October. Escapement counts for 2004 are listed in Table 10 and escapements by species from 1995-2004 are presented in Tables 58-64.

### **LAKE LOUISE WEIR**

The Lake Louise Weir is 9m (30') long and is located approximately 0.8km (1/2 mile) above the confluence of the Buskin River and the tributary creek draining Lake Louise. A weir was used in the 1970s and 1980s for estimating outmigrating juvenile salmon abundance, and for a Dolly Varden mark-recapture study in 1992 (Kuriscak 2004). During 2002, the Lake Louise weir was operated from June 1 through August 15 by two ADF&G Sport Fish employees, who were also responsible for the operation and maintenance of the Buskin River weir. Sockeye escapement counts for 2004 are listed in Table 11 and escapements by species from 2002-2004 can be found in Table 65.

### **LITNIK WEIR**

The Litnik Weir is approximately 27m (88') long and is located about 27m (90') above the outlet of Afognak River which flows into Afognak Bay, on the south end of Afognak Island. A weir was first constructed in 1921 at a site located approximately 0.6km (two-fifths of a mile) below the outlet of Afognak Lake, where intermittent weir counts occurred up to 1978. From 1978 to 1985 the weir was operated annually at this location. In 1986 it was moved to its current location and has been operated there since. The Litnik weir is operated by two ADF&G Commercial Fisheries employees from late May to mid September. Escapement counts for 2004 are listed in Table 12 and escapements by species from 1995-2004 are presented in Tables 66-72.

### **LITTLE KITOI WEIR**

The Little Kitoi Weir is located at the outlet of Little Kitoi Lake, on the east side of Afognak Island, and is situated above a 27m (87') long fish pass, that originates in Little Kitoi Bay and rises approximately 2m (eight feet) to Kitoi Lake (Figure 1). The weir was in operation from 1993 to 1997 as part of a sockeye salmon development project. Escapement was monitored by a single KRAA funded ADF&G Commercial Fisheries employee from mid May to late August, and the fish pass was maintained cooperatively between KRAA and ADF&G. Escapement counts by species from 1995-1997 are presented in Tables 73-75.

### **PAULS BAY WEIR**

The Pauls Bay Weir is approximately 6m (20') long and is located at the outlet of Pauls Lake, approximately 1.3km (four-fifths of a mile) above Pauls Bay, on the north end of Afognak Island (Figure 1). A weir was first constructed on this system in 1983. From 1978 to 1983 sockeye salmon counts were made from a fish ladder at the outlet of Laura Lake, approximately 1.6km (one mile) upstream from the weir's current location. Pauls Bay weir is typically operated by two

KRAA funded ADF&G Commercial Fisheries employees from early June to mid September. Escapement counts for 2004 are listed in Table 13 and escapements by species from 1995-2004 are presented in Tables 76-82.

### **MALINA WEIR**

The Malina Weir is approximately 9m (30') long and is located .46km (three-tenths of a mile) from the outlet of Malina Creek which flows into Malina Bay, on the southwest end of Afognak Island (Figure 1). Initially constructed near the outlet of Lower Malina Lake in 1993, it was moved to its present location in 2001. The weir is operated by two KRAA funded ADF&G Commercial Fisheries employees from late May to mid August. The weir was not operated in 2003. Escapement counts for 2004 are listed in Table 14 and escapements by species from 1995-2004 are presented in Tables 83-88.

### **BIG BAY WEIR**

The Big Bay Weir is approximately 9m (30') long and is located at the head of Big Bay on the west side of Shuyak Island (Figure 1). First constructed in 1988, the weir is operated by ADF&G Commercial Fisheries employees, volunteers and employees of the DNR Division of State Parks from early August to mid September. ADF&G Commercial Fisheries Management provides weir materials and logistical support. The Big Bay weir was not operated in 1997, 1999, 2003 and 2004. Escapement counts by species from 1995-2004 are presented in Tables 89-91.

### **BEAR CREEK WEIR**

The Bear Creek Weir is approximately 8m (25') long and is located near the head of Carry Inlet on the north end of Shuyak Island (Figure 1). The weir was first constructed in 1986, and is operated by the same crew that oversees Big Bay weir. In 1994, 1998, 2003 and 2004 the weir was not operated. Escapements by species from 1995-2004 are presented in Tables 92-95.

### **LITTLE RIVER WEIR**

The Little River Weir is approximately 9m (30') long and is located at the outlet of Little River Lake on the Spiridon Peninsula on the west side of Kodiak Island. The weir was first constructed in 2001 for a three-year study to validate aerial survey and video count accuracy with actual weir counts. The weir is operated by two USFWS employees from late May through July. Escapement counts by species for 2001-2003 are presented in Tables 96-97.

## **ACKNOWLEDGMENTS**

Sincere gratitude is extended to all of the seasonal weir camp employees throughout the past ten years who have enumerated the escapements that support this document. The time they spent enduring inclement weather conditions, exposure to insects, dead fish, bears, and some long hours, as well as time spent away from family, friends, and the modern conveniences of home is much appreciated. Appreciation is also extended to Kevin Brennan, Dennis Gretschi, Jeff Wadle, Joan Brodie, and Joanne Shaker, the dedicated Finfish Management and office staff for coordinating, supporting and documenting this effort. Thanks to Jim Blackburn for his invaluable database support; to Lucinda Neel for her publication expertise; and to reviewers, Switgard Duesterloh, Charles Burkey, and Steve Schrof.

-Footnotes on Next Page-

**Table 3.**—(Page 4 of 4)

- 
- <sup>a</sup> Weir installed and fish tight 18:30 hr. 22 May.
  - <sup>b</sup> Includes an estimate of 1,000 sockeye salmon and 10 Chinook salmon on 1 July due to loose weir panels.
  - <sup>c</sup> Includes an estimate of 50 sockeye salmon and 5 Chinook salmon on 3 July due to bear activity the previous night.
  - <sup>d</sup> Includes an estimate of 200 sockeye salmon and 4 Chinook salmon on 6 July due to bear activity the previous night.
  - <sup>e</sup> Includes an estimate of 35 sockeye salmon on 17 July due to a counting gate being knocked open.
  - <sup>f</sup> Includes an estimate of 1,000 sockeye salmon on 22 July due to bear activity the previous night.
  - <sup>g</sup> Includes an estimate of 22 sockeye salmon and 1,000 pink salmon in the daily escapement 21 August due to scouring under weir panels.
  - <sup>h</sup> Includes an estimate of 200 sockeye salmon and 20,000 pink salmon in the daily escapement 31 August due to scouring under weir panels.
  - <sup>i</sup> Includes an estimate of 4,200 sockeye salmon on 22 September that escaped while weir was opened to flush pink salmon carcasses downriver.
  - <sup>j</sup> Includes an estimate of 300 sockeye salmon, 40 coho salmon, and 20 pink salmon on 23 September that escaped while weir was opened to flush pink salmon carcasses downriver.
  - <sup>k</sup> Includes an estimate of 3,500 sockeye salmon and 50 coho salmon on 25 September that escaped while weir was opened to flush pink salmon carcasses downriver.
  - <sup>l</sup> Weir removed 6 October.

<sup>a</sup> Weir installed and fish tight 21:00 hr. 26 May.

<sup>b</sup> Includes an estimate of 300 sockeye salmon, 30 Chinook salmon and 20 steelhead in the daily escapement on 5 July due to the boat gate being submerged the prior evening.

<sup>c</sup> Includes an estimate of 1,500 pink, and 1,000 sockeye salmon in the daily escapement 26 July due to scouring under weir panels.

<sup>d</sup> No counts on 27 July due to cloudy water inhibiting fish identification.

<sup>e</sup> Included an estimate of 2,500 sockeye salmon, 4,000 pink salmon and 5 steelhead downstream in the daily escapement 28 July due to a portion of the weir collapsing because of high water levels. Remaining weir panels were also removed due to high water.

<sup>f</sup> Weir panels remain out 29 July due to high water. All species escapements on this day are estimates.

<sup>g</sup> Weir panels remain out 30 July due to high water. All species escapements on this day are estimates.

<sup>h</sup> Includes an estimate of 5,000 pink salmon in the daily escapement 1 August due to scouring under weir panels.

<sup>i</sup> Weir removed 26 August.

<sup>j</sup> Counts on 27 August are post weir estimates.

**Table 8.**—(Page 4 of 4)

- 
- <sup>a</sup> The upper sockeye salmon weir was removed on 30 July. Lower pink and coho salmon weir installed on 30 July. Included 5,000 pink salmon in the daily escapement 30 July due to pink salmon moving upstream during the weir relocation.
  - <sup>b</sup> Included 20 sockeye, 1069 pink and 8 coho salmon in the daily escapement on 10 August due to weir panels being removed due to high water 9-10 August.
  - <sup>c</sup> Included 9 sockeye, 2,980 pink and 225 coho salmon in the daily escapement 24 August due to weir panels being removed due to high water.
  - <sup>d</sup> Included 1 sockeye, 2,305 pink and 192 coho salmon in the daily escapement 25 August due to weir panels being removed due to high water.
  - <sup>e</sup> Lower pink and coho salmon weir removed on 30 September.

**Table 13.**—(Page 4 of 4)

- 
- <sup>a</sup> Weir removed 25 September.
  - <sup>b</sup> Weir removed 25 September.
  - <sup>c</sup> Weir removed 25 September.
  - <sup>d</sup> Weir panels removed due to high water 2-24 June. Methods used to estimate escapement published in (Sagalkin and Nelson 2000). Includes an estimate of 10 Chinook salmon in the daily escapement due to a hole in the weir on 24 July. Weir panels removed the evening of 24 September due to high water. Weir removed on 26 September.
  - <sup>e</sup> Weir removed 23 September.
  - <sup>f</sup> Includes an estimate of 100 Chinook salmon in the daily escapement due to a hole in the weir created by bears on 15 June. Includes an estimate of 30 Chinook salmon in the daily escapement due to a hole in the weir created by bears on 22 June. Includes an estimate of 30 Chinook salmon in the daily escapement due to a hole in the weir created by bears on 23 June. Includes an estimate of 20 Chinook salmon in the daily escapement due to a hole in the weir created by bears on 29 June. Includes an estimate of 30 Chinook salmon in the daily escapement due to a hole in the weir created by bears on 3 July. Includes an estimate of 10 Chinook salmon in the daily escapement due to a hole in the weir created by bears on 11 July. Weir removed 24 September.
  - <sup>g</sup> Weir removed 18 September.
  - <sup>h</sup> Includes an estimate of 20 Chinook salmon in the daily escapement as an estimate due to a hole in the weir on 2 June. Weir removed 28 September.
  - <sup>i</sup> Includes an estimate of 20 king salmon in the daily escapement as an estimate due to a hole in the weir caused by bears on 24 June. Includes an estimate of 10 king salmon in the daily escapement as an estimate due to a hole in the weir on 6 July. Weir removed 28 September.
  - <sup>j</sup> Refer to Table 3.

**Table 14.**—Karluk daily cumulative escapement counts for early and late run sockeye salmon 1995–2004.

- <sup>a</sup> Weir removed 25 September. 25,000 sockeye salmon included in the daily escapement as a post weir estimate 25 September. 78,000 sockeye salmon included in daily escapement as a post weir estimate on 26 September.
- <sup>b</sup> Weir panels removed due to high water 7 September. Weir panels removed due to high water on 12-13 September. Weir removed 25 September. Included 30,000 sockeye salmon estimate as a post weir estimate on 27 Sept.
- <sup>c</sup> Weir removed 25 September.
- <sup>d</sup> Weir panels removed due to high water 2-24 June. Methods used to estimate escapement published in (Sagalkin and Nelson 2000). Includes an estimate of 150 sockeye salmon in the daily escapement due to a hole in the weir on 24 July. Includes an estimate of 10 sockeye salmon in the daily escapement due to a hole in the weir on 11 August. Weir panels removed the evening of 24 September due to high water. Included 45,000 sockeye salmon in the daily escapement 25 September. Weir removed on 26 September.
- <sup>e</sup> Pre weir estimate of 250 sockeye salmon included as escapement on 23 May. Weir installed 26 May. Weir removed 23 September and 10,000 sockeye salmon included in daily escapement as a post weir estimate.
- <sup>f</sup> Includes an estimate of 1,000 sockeye salmon in the daily escapement due to a hole in the weir created by bears on 15 June. Includes an estimate of 500 sockeye salmon in the daily escapement due to a hole in the weir created by bears on 19 June. Includes an estimate of 1,000 sockeye salmon in the daily escapement due to a hole in the weir created by bears on 22 June. Includes an estimate of 1,500 sockeye salmon in the daily escapement due to a hole in the weir created by bears on 23 June. Includes an estimate of 150 sockeye salmon in the daily escapement due to a hole in the weir created by bears on 29 June. Includes an estimate of 500 sockeye salmon in the daily escapement due to a hole in the weir created by bears on 3 July. Includes an estimate of 200 sockeye salmon in the daily escapement due to a hole in the weir created by bears on 6 July. Includes an estimate of 100 sockeye salmon in the daily escapement due to a hole in the weir created by bears on 11 July. Includes an estimate of 2,000 sockeye salmon in the daily escapement due to scouring under weir panels on 24 August. Includes an estimate of 5,000 sockeye salmon in the daily escapement due to scouring under weir panels on 27 August. Weir removed 24 September and 6,500 sockeye salmon included in daily escapement as post weir estimate. An additional 10,000 sockeye salmon included in daily escapement as a post weir estimate 27 September.
- <sup>g</sup> Weir removed 18 September. Includes 14,000 sockeye salmon as a post weir estimate on 19 September.
- <sup>h</sup> Includes an estimate of 300 sockeye salmon in the daily escapement due to a hole in the weir on 2 June. Includes an estimate of 25 sockeye salmon in the daily escapement due to a hole in the weir on 28 July. Weir removed 28 September. 12,000 sockeye included in the daily escapement as a post weir estimate.
- <sup>i</sup> Includes an estimate of 200 sockeye salmon in the daily escapement due to a hole in the weir caused by bears on 24 June. Includes an estimate of 200 sockeye salmon in the daily escapement due to a hole in the weir on 6 July. Includes an estimate of 25 sockeye salmon in the daily escapement due to a hole along the salmon trap gate on 7 August. Includes an estimate of 200 sockeye salmon in the daily escapement due to the boat gate malfunctioning. Includes an estimate of 22,200 sockeye salmon in the daily escapement 20 August due to weir panels being removed because of high water. Weir panels remained out a portion of the day due to high water 21 August and an estimate of 13,320 sockeye salmon were included in the daily escapement. Weir was removed for the season 28 September and 35,000 sockeye salmon were included in the escapement as a post weir estimate.
- <sup>j</sup> Refer to Table 3.
- <sup>k</sup> Counts post 15 July are considered late-run.

**Table 15.**—Karluk daily cumulative escapement counts for coho salmon, 1995–2004.

<sup>a</sup> Weir removed 25 September.<sup>b</sup> Weir panels removed due to high water on 7 September. Daily escapement includes an unknown estimate. Weir panels removed due to high water on 12-13 September. Daily escapement includes an unknown estimate. Weir removed 25 September. Daily escapement includes 3,000 coho salmon as a post weir estimate on 27 September.<sup>c</sup> Weir removed 25 September. Daily escapement includes 1,000 coho salmon as a post weir estimate on 26 September.<sup>d</sup> Weir panels removed the evening of 24 September due to high water. Included 10,000 coho salmon as a post weir estimate on 25 September. Weir removed on 26 September.<sup>e</sup> Weir removed 23 September and 500 coho salmon included in the daily escapement as a post weir estimate.<sup>f</sup> Weir removed 24 September and 2,000 coho salmon included in the daily escapement as a post weir estimate.<sup>g</sup> Weir removed on September. Included 5,000 coho salmon as a post weir estimate on 19 September.<sup>h</sup> Includes an estimate of 18,000 coho salmon in the daily escapement as post season estimates. The weir was removed on 28 September.<sup>i</sup> Included an estimate of 50 coho salmon in the daily escapement 20 August due to weir panels being removed due to high water. Weir panels remained out a portion of the day due to high water 21 August and an estimate of 50 coho salmon were included in the daily escapement. Weir was removed for the season 28 September and 8,500 coho salmon included in the escapement as a post weir estimate.<sup>j</sup> Refer to Table 3.

**Table 16.**—Karluk daily cumulative escapement counts for pink salmon, 1995-2004.

<sup>a</sup> Weir removed 25 September.<sup>b</sup> Weir panels removed due to high water on 7 September. Daily escapement includes an unknown estimate. Weir panels removed due to high water on 12-13 September. Daily escapement includes an unknown estimate. Weir removed 25 September.<sup>c</sup> Weir removed 25 September.<sup>d</sup> Includes an estimate of 15 pink salmon in the daily escapement due to a hole in the weir on 24 July. Includes an estimate of 1,000 pink salmon in the daily escapement due to a hole in the weir on 11 August. Weir panels removed the evening of 24 September due to high water. Weir removed 26 September.<sup>e</sup> Weir removed 23 September.<sup>f</sup> Includes an estimate of 4,000 pink salmon in the daily escapement due to scouring under weir panels on 24 August. Includes an estimate of 40,000 pink salmon in the daily escapement due to scouring under weir panels on 27 August. Weir removed 24 September.<sup>g</sup> Weir removed 18 September. Included 1,000 pink salmon as a post weir estimate on 19 September.<sup>h</sup> Includes an estimate of 500 pink salmon in the daily escapement as an estimate due to a hole in the weir on 28 July. Weir removed 28 September.<sup>i</sup> Includes an estimate of 5 pink salmon in the daily escapement as an estimate due to a hole along the salmon trap gate on 7 August and an estimate of 100 pink salmon in the daily escapement due to the boat gate malfunctioning. Includes an estimate of 2,675 pink salmon in the daily escapement 20 August due to weir panels being removed due to high water. Weir panels remained out a portion of the day due to high water 21 August and an estimate of 2,675 pink salmon were included in the daily escapement. Weir removed 28 September and 10 pink salmon included in the escapement as a post weir estimate.<sup>j</sup> Refer to Table 3.

<sup>a</sup> Weir removed 27 August.<sup>b</sup> Includes an estimate of 25 Chinook salmon in the daily escapement due to a hole in the weir on 5 June. Weir removed 26 August.<sup>c</sup> Includes an estimate of 25 Chinook salmon in the daily escapement due to a hole in the weir on 7 July. Weir removed 30 August.<sup>d</sup> Weir could not be installed at its historic location due to high water. Weir installed below the outlet of Red Lake on 11 June. Methods used to estimate escapement are published in Sagalkin and Nelson (2000).<sup>e</sup> Includes an estimate of 1,000 sockeye in the daily escapement due to a hole in the weir on 6 July. Weir panels removed due to high water 12-14 August. Escapement estimates for this time period were zero. Weir panels reinstalled on 15 August. Weir removed 22 August.<sup>f</sup> Includes an estimate of 1,850 sockeye salmon because weir panels were removed due to high water 2-3 August. Weir panels were reinstalled on 4 August. Weir removed 26 August.<sup>g</sup> Includes an estimate of 100 Chinook due to a hole in the weir on 2 June. Weir panels removed 19-20 July due to high water. Escapement on 19 July includes an undetermined estimate and estimate was zero on 20 July. Weir panels removed due to high water on 20-21 August. Weir removed 29 August.<sup>h</sup> Includes an estimate of 250 Chinook salmon in the daily escapement due to a hole created by bears 16 June. Includes an estimate of 75 Chinook salmon in the daily escapement due to a hole created by bears 20 June. Weir panels were removed due to high water on 21 August. All species escapements for the day are estimates. Weir panels remained out due to high water 22 August. All species escapements for the day are estimates. Weir was removed 7 September and all species escapements entered are post weir estimates.<sup>i</sup> Includes an estimate of 30 Chinook salmon in the daily escapement due to a hole in the weir 12 July. Includes an estimate of 20 Chinook salmon in the daily escapement due to a hole in the weir created by bears on 20 July. Weir was removed 12 August and all species escapements entered are post weir estimates.<sup>j</sup> Refer to Table 4.

**Table 21.**—Ayakulik daily cumulative escapement counts for sockeye salmon, 1995-2004.

<sup>a</sup> Includes an estimate of 100 sockeye salmon in the daily escapement due to a hole in the weir on 18 June. Weir removed 27 August.

<sup>b</sup> Includes an estimate of 500 sockeye salmon in the daily escapement due to a hole in the weir on 5 June. Includes an estimate of 100 sockeye salmon in the daily escapement due to a hole in the weir on 10 July. Includes an estimate of 100 sockeye salmon in the daily escapement due to a hole in the weir on 11 August. Weir removed 26 August. No post weir estimates.

<sup>c</sup> Includes an estimate of 100 sockeye salmon in the daily escapement due to a hole in the weir on 1 June. Includes an estimate of 225 sockeye salmon in the daily escapement due to a hole in the weir on 7 July. Includes an estimate of 750 sockeye salmon in the daily escapement due to a hole in the weir on 18 July. Weir removed 30 August. Included 1,000 sockeye salmon in the daily escapement as a post weir estimate.

<sup>d</sup> Weir was not able to be installed due to high water at its historical location. A weir was then installed below the outlet of Red Lake on 11 June. Methods used to estimate escapement are published in Sagalkin and Nelson (2000).

<sup>e</sup> Includes an estimate of 1,000 sockeye salmon in the daily escapement due to a hole in the weir on 6 July. Weir panels removed due to high water 12-14 August and estimates were zero during this time period. Weir panels reinstalled on 15 August. Weir removed 22 August.

<sup>f</sup> Weir panels removed due to high water 2-3 August and includes an estimate of 1,850 sockeye salmon in the daily escapement. Weir panels were reinstalled on 4 August. Weir removed 26 August.

<sup>g</sup> Includes an estimate of 1,200 sockeye salmon due to a hole in the weir on 2 June. Weir panels removed on 19-20 July due to high water. Escapement on 19 July includes an undetermined estimate and estimate was zero on 20 August. Weir panels removed due to high water on 20-21 August. Weir removed 29 August.

<sup>h</sup> A pre weir estimate of 49 sockeye salmon were included into the daily escapement as an estimate due to fish passing upstream during weir installation. Includes an estimate of 3,000 sockeye salmon in the daily escapement due to a hole created by bears 16 June. Includes an estimate of 400 sockeye in the daily escapement due to a hole created by bears 20 June. Weir panels removed due to high water on 21 August. All species escapements for the day are estimates. Weir panels remained out due to high water 22 August. All species escapements for the day are estimates. Weir removed 7 September and all species escapements entered are post weir estimates.

<sup>i</sup> Includes an estimate of 250 sockeye salmon in the daily escapement due to a hole in the weir on 12 July. Includes an estimate of 400 sockeye salmon in the daily escapement due to a hole in the weir created by bears on 20 July. Includes an estimate of 15 sockeye salmon in the daily escapement due to a hole in the weir created by bears on 29 July. Weir was removed 12 August and all species escapements entered are post weir estimates.

<sup>j</sup> Refer to Table 4.

**Table 22.**—Ayakulik daily cumulative escapement counts for coho salmon, 1995–2004.

<sup>a</sup> Weir removed 27 August. Included 1,000 coho salmon as a post weir estimate on 28 August.

<sup>b</sup> Weir removed 26 August. No post weir estimates.

<sup>c</sup> Weir removed 30 August. Included 1,700 coho salmon in the daily escapement as a post weir estimate on 30 September.

<sup>d</sup> Weir was not able to be installed due to high water at its historical location. A weir was then installed below the outlet of Red Lake on 11 June.

<sup>e</sup> Weir panels removed due to high water 12-14 August and no estimates were entered as escapement during this time frame due to the absence of salmon migrating upstream. Weir panels reinstalled on 15 August. Weir removed on 22 August.

<sup>f</sup> Weir removed on 26 August.

<sup>g</sup> Weir panels removed due to high water on 20-21 August. Weir crew did not indicate if daily escapements posted include an estimate. Weir removed 29 August.

<sup>h</sup> Includes an estimate of 5 coho salmon in the daily escapement due to the raft gate being submerged on 12 August. Weir panels were removed due to high water on 21 August. All species escapements for the day are estimates. Weir panels remained out due to high water 22 August. All species escapements for the day are estimates. Weir was removed 7 September and all species escapements entered are post weir estimates.

<sup>i</sup> Weir removed 12 August and all species escapements entered are post weir estimates.

<sup>j</sup> Refer to Table 4.

**Table 23.**—Ayakulik daily cumulative escapement counts for pink salmon, 1995-2004.

**Table 23.**—(Page 3 of 3)

- 
- <sup>a</sup> Weir removed 27 August. Included 1,000 pink salmon as a post weir estimate on 28 August.
  - <sup>b</sup> Includes an estimate of 2,000 pink salmon in the daily escapement due to a hole in the weir on 11 August. Weir removed 26 August. No post weir estimates.
  - <sup>c</sup> Weir removed 30 August. Included 300 pink salmon in the daily escapement as a post weir estimate on 30 September.
  - <sup>d</sup> Weir was not able to be installed due to high water at its historical location. A weir was then installed below the outlet of Red Lake on 11 June.
  - <sup>e</sup> Weir panels removed due to high water 12-14 August and no estimates were entered as escapement during this time frame due to the absence of salmon migrating upstream. Weir panels reinstalled on 15 August. Weir removed on 22 August.
  - <sup>f</sup> Weir panels removed due to high water 2-3 August and includes an estimate of 22,000 pink salmon while weir panels were removed. Weir panels reinstalled on 4 August. Weir removed 26 August.
  - <sup>g</sup> Weir panels removed 19-20 July due to high water. Escapement on 19 July includes an undetermined estimate and estimate was zero 20 July. Weir panels removed due to high water on 20-21 August. Weir crew did not indicate if daily escapements posted include an estimate. Weir removed 29 August.<sup>h</sup> Includes an estimate of 150 pink salmon in the daily escapement due to the raft gate being submerged on 12 August. Weir panels removed due to high water on 21 August. All species escapements for the day are estimates. Weir panels remained out due to high water 22 August. All species escapements for the day are estimates. Weir was removed 7 September and all species escapements entered are post weir estimates.
  - <sup>i</sup> Includes an estimate of 10 pink salmon in the daily escapement due to a hole in the weir on 12 July. Includes an estimate of 250 pink salmon in the daily escapement due to a hole in the weir created by bears on 20 July. Includes an estimate of 10 pink salmon in the daily escapement due to a hole in the weir created by bears on 29 July. Weir removed 12 August and all species escapements entered are post weir estimates.
  - <sup>j</sup> Refer to Table 4.

<sup>a</sup> Weir removed 27 August.<sup>b</sup> Weir removed 27 August.<sup>c</sup> Weir removed 30 August.<sup>d</sup> Weir was not installed at its historic location due to high water. A weir was then installed below the outlet of Red Lake on 11 June.<sup>e</sup> Weir removed 22 August.<sup>f</sup> Weir removed 26 August.<sup>g</sup> Weir removed 29 August.<sup>h</sup> Weir panels were removed due to high water on 21 August. All species escapements for the day are estimates. Weir panels remained out due to high water on 22 August. All species escapements for the day are estimates. Weir was removed 7 September and all species escapements are post weir estimates.<sup>i</sup> Weir removed 12 August and all species escapements are post weir estimates.<sup>j</sup> Refer to Table 4.

**Table 25.**—Ayakulik daily cumulative escapement counts for steelhead downstream, 1995–2004.

<sup>a</sup> Weirs removed 9 September.<sup>b</sup> Weirs removed 31 August.<sup>c</sup> Weirs removed 1 September. Included one Chinook salmon as a post weir estimate on 1 September.<sup>d</sup> East weir installed on 28 May. Water level too high to install remaining weirs. Removed east weir panels due to high water on 30 May. Included an estimate of seven Chinook salmon in the daily escapement on 15 June based on visual observation and time counts made 30 May-14 June. Included an estimate of six Chinook salmon in the daily escapement on June 16 based on visual observation and time counts. East weir reinstalled on 17 June. Installed far west weir on 18 June. West weir reinstalled on 22 June. In addition to estimates made by visual observations and time counts enumeration (30 May-14 June); methods used to estimate escapement are published in Sagalkin and Nelson (2000). Weirs removed 27 August.<sup>e</sup> Weirs removed 28 August.<sup>f</sup> Weirs removed 28 August.<sup>g</sup> Weirs removed 25 August.<sup>h</sup> Weir panels were removed on 9 June due to high water. All species escapements on this date are estimates. Weir panels remained out 10 June due to high water. All species escapements on this date are estimates. The far west weir was removed 25 August. The west weir was removed 26 August. East weir removed 27 August.<sup>i</sup> Weir installed 30 May. Weir removed 13 August.<sup>j</sup> Refer to Table 5.

**Table 28.**—Dog Salmon daily cumulative escapement counts for sockeye salmon, 1995–2004.

<sup>a</sup> Weirs removed 9 September. Included 350 sockeye salmon as a post weir estimate on 10 September.

<sup>b</sup> Weirs removed 31 August. Included 55 sockeye salmon as a post weir estimate on 31 August.

<sup>c</sup> Weirs removed 1 September. Included 1,000 sockeye salmon as a post weir estimate on 1 September.

<sup>d</sup> Did not install west weirs due to high water. Removed east weir panels due to high water on 30 May. Included an estimate of 15,000 sockeye salmon in the daily escapement on 15 June based on visual observation and time counts made 30 May-14 June. Included an estimate of 9,000 sockeye salmon in the daily escapement on 16 June based on visual observation and time counts made 30 May-15 June. East weir reinstalled on 17 June. Included an estimate of 4,000 sockeye salmon in the daily escapement on 17 June prior to weir installation. Installed the far west weir on 18 June and included an estimate of 300 sockeye salmon in the daily escapement. Included an estimate of 45 sockeye salmon in the daily escapement on 19 June while the west weir remained out. Included an estimate of 225 sockeye salmon in the daily escapement on 20 June due to west weir remaining out. West weir installed 22 June. In addition to estimates made by visual observations and time count enumeration (30 May-14 June); methods used to estimate escapement are presented in Sagalkin and Nelson (2000). Weirs removed 27 August. Includes 600 sockeye on 27 August as a post weir estimate.

<sup>e</sup> Weirs removed 28 August. Included 1,600 sockeye salmon as a post weir estimate on 28 August.

<sup>f</sup> Weirs removed 28 August. Included 400 sockeye salmon as a post weir estimate on 28 August.

<sup>g</sup> Included 8,500 sockeye salmon in the daily escapement 30 May due to salmon migrating upstream while installing east weir and scouring under weir panels that occurred shortly after installation. Weirs removed 25 August and 300 sockeye salmon included in the daily escapement as a post weir estimate.

<sup>h</sup> Weir panels removed on 9 June due to high water. All species escapements on this date are estimates. Weir panels remain out 10 June due to high water. All species escapements on this date are estimates. The far west weir removed 25 August. The west weir removed 26 August. Post weir estimates for the east and west weirs on 27 August was 150 sockeye. Additional post weir estimates made by ADF&G personnel working in the bay, monitoring the Dog Salmon river were included on 4-11 September.

<sup>i</sup> Weir installed 30 May. Weir removed 13 August.

<sup>j</sup> Refer to Table 5.

<sup>a</sup> Weirs removed 9 September. Included 2,030 coho salmon as a post weir estimate on 10 September.

<sup>b</sup> Weirs removed 31 August. Included 3,000 coho salmon as a post weir estimate on 31 August.

<sup>c</sup> Weirs removed 1 September. Included 3,000 coho salmon as a post weir estimate on 1 September.

<sup>d</sup> Weirs removed 27 August. Included 3,800 coho salmon in the daily escapement on 27 August as a post weir estimate.

<sup>e</sup> Weirs removed 28 August. Included 4,000 coho salmon as a post weir estimate on 3 September.

<sup>f</sup> Weirs removed 28 August. Included 2,050 coho salmon as a post weir estimate on 28 August.

<sup>g</sup> Weirs removed 25 August. Included 975 coho salmon as a post weir estimate 25 August.

<sup>h</sup> Far west weir removed 25 August. West weir removed 26 August. Included 1,425 coho salmon in the daily escapement on 27 August as post weir estimates. Additional post weir estimates made by ADF&G personnel working in the bay, monitoring the Dog Salmon river were included on 4-11 September.

<sup>i</sup> Weir installed 30 May. Weir removed 13 August.

<sup>j</sup> Refer to Table 5.

<sup>a</sup> Weirs removed 9 September. Included 5,175 pink salmon as a post weir estimate on 10 September.<sup>b</sup> Weirs removed 31 August. Included 34,000 pink salmon as a post weir estimate on 31 August.<sup>c</sup> Weirs removed 1 September. Included 6,500 pink salmon as a post weir estimate on 1 September.<sup>d</sup> Weirs removed 27 August. Included 75,000 pink salmon in the daily escapement on 27 August as a post weir estimate.<sup>e</sup> Weirs removed 28 August. Included 14,500 pink salmon as a post weir estimate on 28 August.<sup>f</sup> Weirs removed 28 August. Included 41,000 pink salmon as a post weir estimate on 28 August.<sup>g</sup> Weirs removed 25 August and 3,000 pink salmon included in the daily escapement as a post weir estimate.<sup>h</sup> Far west weir removed 25 August. Includes an estimate of 25 pink salmon in the daily escapement as post weir estimates. West weir removed 26 August. Post weir estimates for the east and west weirs entered on 27 August was 44,000 pink salmon. Additional post weir estimates made by ADF&G personnel working in the bay, monitoring the Dog Salmon river were included on 4-11 September.<sup>i</sup> Weir installed 30 May. Weir removed 13 August.<sup>j</sup> Refer to Table 5.

**Table 31.**—Dog Salmon daily cumulative escapement counts for chum salmon, 1995-2004.

<sup>a</sup> Weirs removed 9 September. Included 925 chum salmon as a post weir estimate on 10 September.<sup>b</sup> Weirs removed 31 August. Included 1,000 chum salmon as a post weir estimate on 31 August.<sup>c</sup> Weirs removed 1 September. Included 1,500 chum salmon as a post weir estimate on 1 September.<sup>d</sup> Weirs removed 27 August. Included 1,150 chum salmon in the daily escapement on 27 August as a post weir estimate.<sup>e</sup> Weirs removed 28 August. Included 1,500 chum salmon as a post weir estimate on 3 September.<sup>f</sup> Weirs removed 28 August. Included 1,535 chum salmon as a post weir estimate on 28 August. Included 3,000 chum salmon noted in the Dog Salmon sloughs as a post weir estimate on 29 August<sup>g</sup> Weirs removed 25 August and 550 chum salmon included in the daily escapement as a post weir estimate.<sup>h</sup> Far west weir removed 25 August. West weir removed 26 August. Post weir estimates for the east and west weirs on 27 August was 775 chum salmon. Additional post weir estimates made by ADF&G personnel working in the bay, monitoring the Dog Salmon river were included on 4-11 September.<sup>i</sup> Weir installed 30 May. Weir removed 13 August.<sup>j</sup> Refer to Table 5.

**Table 32.**—Dog Salmon daily cumulative escapement counts for steelhead downstream, 1995–2004.

- <sup>a</sup> Weir removed on 11 September. Includes 200 sockeye salmon as a post weir estimate on 11 September.
- <sup>b</sup> Pre weir estimate of 500 sockeye salmon included as escapement on 30 May. Weir removed on 5 September. Included 1,000 sockeye salmon as a post weir estimate on 6 September.
- <sup>c</sup> Weir removed on 10 September. Included 1,000 sockeye salmon as a post weir estimate on 11 September.
- <sup>d</sup> No escapement on 7 June due to poor visibility. Weir removed on 8 September.
- <sup>e</sup> No escapement on 4-5 August due to poor visibility. Weir removed on 9 September. Included 1,800 sockeye salmon as a post weir estimate on 10 September.
- <sup>f</sup> Weir removed on 12 September. Included 200 sockeye salmon as a post weir estimate on 13 September.
- <sup>g</sup> Weir removed on 12 September. Included 300 sockeye salmon as a post weir estimate on 12 September.
- <sup>h</sup> Included an estimate of 32 sockeye in the daily escapement due to a scour hole on 9 August. Weir removed for the season on 20 September and 400 sockeye salmon were included in the daily escapement as a post weir estimate.
- <sup>i</sup> Weir removed 6 September.
- <sup>j</sup> Refer to Table 7.
- <sup>k</sup> Counts post 15 July are considered Late-run

<sup>a</sup> Weir removed on 11 September.<sup>b</sup> Weir removed on 5 September.<sup>c</sup> Weir removed on 10 September.<sup>d</sup> Weir removed on 8 September.<sup>e</sup> No escapement 4-5 August due to poor visibility. Weir removed on 9 September. Included 2,000 pink salmon as a post weir estimate on 10 September.<sup>f</sup> Weir removed on 12 September. Included 10 pink salmon as a post weir estimate on 13 September.<sup>g</sup> Weir removed on 12 September. Included 250 pink salmon as a post weir estimate on 12 September.<sup>h</sup> Includes an estimate of pink salmon in the daily escapement due to a scour hole on 9 August. Weir removed on 20 September and included 10 pink salmon in the daily escapement as a post weir estimate.<sup>i</sup> Weir removed 6 September.<sup>j</sup> Refer to Table 7.

- <sup>a</sup> Weir panels removed on 29 June through 30 July. No personnel on site between the first and second migration of sockeye salmon. Weir panels reinstalled on 31 July. Weir removed on 11 September. Included 350 sockeye salmon as a post weir estimate on 11 September.
- <sup>b</sup> Weir panels removed on 28 June through 1 July. No personnel on site between the first and second migration of sockeye salmon. Included an estimate of 200 sockeye salmon after pulling weir panels on 28 June. Weir panels reinstalled on 1 July. Weir gate open and weir unmanned 21-29 July. Weir gate reinstalled on 30 July. Includes an estimate of 50 sockeye salmon due to a hole in the weir on 6 September. Weir removed on 6 September. Included 1,010 sockeye salmon as a post weir estimate on 10 September.
- <sup>c</sup> Weir panels removed on 3 July through 28 July due to budget restraints during the first and second migration of sockeye salmon. Weir panels reinstalled on 29 July. Weir removed on 12 September. Included 2,500 sockeye salmon as a post weir estimate on 12 September.
- <sup>d</sup> No escapement enumerated on 26 August. Personnel monitoring the weir were in Alitak conducting work. Weir removed on 14 September. Included 4,000 sockeye salmon as a post weir estimate on 15 September.
- <sup>e</sup> Weir removed on 9 September. Included 770 sockeye salmon as a post weir estimate on 10 September.
- <sup>f</sup> Includes an estimate of 5 sockeye salmon in the daily escapement due to scouring around a weir panel and the river bank on 8 September. Weir removed on 9 September. Post weir estimates entered 10 September.
- <sup>g</sup> Weir removed 14 September and daily escapements include a post weir estimate of 1,000 sockeye salmon.

<sup>a</sup> Weir removed on 11 September. Included 400 coho salmon as a post weir estimate on 11 September.

<sup>b</sup> Daily counts include an estimate of 35 coho salmon due to a hole in the weir on 6 September. Weir removed on 6 September. Included 4,000 coho salmon as a post weir estimate on 10 September.

<sup>c</sup> Weir removed on 12 September. Included 2,000 coho salmon as a post weir estimate on 12 September.

<sup>d</sup> No escapement enumerated on 26 August. Personnel monitoring the weir was in Alitak conducting work. Weir removed on 14 September. Included 2,000 coho salmon as a post weir estimate on 15 September.

<sup>e</sup> Weir removed on 9 September. Included 1,530 coho salmon as a post weir estimate on 10 September.

<sup>f</sup> Includes an estimate of 9 coho salmon in the daily escapement due to scouring around a weir panel and the river bank on 8 September. Weir removed on 9 September. Counts on 10 September are post weir estimates.

<sup>g</sup> Weir removed 14 September. Included 5,000 coho salmon in the daily escapement as a post weir estimate.

<sup>a</sup> Weir removed on 11 September. Included 2,500 pink salmon as a post weir estimate on 11 September.

<sup>b</sup> Includes an estimate of 500 pink salmon due to a hole in the weir on 6 September. Weir removed on 6 September. Included 1,020 pink salmon as a post weir estimate on 10 September.

<sup>c</sup> Weir removed on 12 September. Included 1,000 pink salmon as a post weir estimate on 12 September.

<sup>d</sup> No escapement enumerated on 26 August. Personnel monitoring the weir was in Alitak conducting work. Weir removed on 14 September.

<sup>e</sup> Weir removed on 9 September. Included 11,500 pink salmon as a post weir estimate on 10 September.

<sup>f</sup> Includes an estimate of 150 pink salmon in the daily escapement due to a scour hole 5 September. Includes an estimate of 450 pink in the daily escapement due to scouring around a weir panel and the river bank on 8 September. Weir removed on 9 September. Counts on 10 September are post weir estimates.

<sup>g</sup> Weir removed 14 September. Post weir estimate of 8,000 pink salmon included in the daily escapement 14 September.

**Table 52.**—(Page 3 of 3)

Date	Year								
	1995 <sup>a</sup>	1996 <sup>b</sup>	1997 <sup>c</sup>	1998 <sup>d</sup>	1999 <sup>e</sup>	2000 <sup>f</sup>	2001 <sup>g</sup>	2002 <sup>h</sup>	2003 <sup>i</sup>
9/22	43,859	35,488	31,016	26,263	62,821	45,604	45,608	36,336	57,993

<sup>a</sup> Includes an estimate of 1,200 sockeye salmon on 13 July due to the counting gate being open 16 inches by vandals. Weir removed on 10 August.

<sup>b</sup> Includes an estimate of 100 sockeye salmon in the daily escapement due to a hole in the weir on 18 July. Weir removed on 9 August and 800 sockeye salmon included in the daily escapement as a post weir estimate.

<sup>c</sup> Includes an estimate of 1,000 sockeye salmon in the daily escapement due to high water on 18 July. Includes an estimate of 500 sockeye salmon in the daily escapement due to high water on 19 July. Includes an estimate of 500 sockeye salmon in the daily escapement due to high water on 20 July. Includes an estimate of 650 sockeye salmon in the daily escapement due to high water on 21 July. Weir removed 6 September.

<sup>d</sup> Weir removed on 31 August.

<sup>e</sup> Pre weir estimate of 2,276 sockeye salmon included as escapement on 4 July. Weir removed on 9 August.

<sup>f</sup> Pre weir estimate of 200 sockeye salmon included as escapement on 27 June. Weir removed on 30 August.

<sup>g</sup> Weir removed on 29 August.

<sup>h</sup> An estimate of 300 sockeye salmon was included into the daily escapement due to fish passing upstream during weir installation. A pre weir aerial survey of 5,287 sockeye salmon past the weir site was made on 29 June and included into the daily escapement on 3 July. Weir removed on 12 September.

<sup>i</sup> Weir removed 29 August and included 400 sockeye salmon in the daily escapement as a post weir estimate.

<sup>a</sup> Weir removed on 10 August.

<sup>b</sup> Weir removed on 9 August.

<sup>c</sup> Weir removed 6 September.

<sup>d</sup> Weir removed on 31 August.

<sup>e</sup> Weir removed on 9 August.

<sup>f</sup> Weir removed on 30 August.

<sup>g</sup> Weir removed on 29 August.

<sup>h</sup> Weir removed on 12 September.

<sup>i</sup> Weir removed 29 August and included 400 coho salmon in the daily escapement as a post weir estimate.

**Table 54.**—Saltery daily cumulative escapement counts for pink salmon, 1995–2004.

<sup>a</sup> Includes an estimate of 25 pink salmon on 13 July due to the counting gate being open 16 inches by vandals. Weir removed on 10 August.

<sup>b</sup> Weir removed on 9 August and 2,500 pink salmon included in the daily escapement as a post weir estimate.

<sup>c</sup> Weir removed 6 September.

<sup>d</sup> Weir removed on 31 August.

<sup>e</sup> Weir removed on 9 August.

<sup>f</sup> Weir removed on 30 August and 16,000 pink salmon included in the daily escapement as a post weir estimate.

<sup>g</sup> Weir removed on 29 August.

<sup>h</sup> Weir removed on 12 September.

<sup>i</sup> Weir removed 29 August and included 3,000 pink salmon in the daily escapement as a post weir estimate.

**Table 59.**—(Page 4 of 4)

- 
- <sup>a</sup> Upper sockeye salmon weir removed on 31 July. Included 683 sockeye salmon on 14 August as an estimate in the daily escapement based on a ten year average. Lower pink and coho salmon weir installed on 15 August. Lower pink and coho salmon weir removed on 16 September.
  - <sup>b</sup> Upper sockeye salmon weir removed on 29 July - 14 August. Included 616 sockeye salmon as an estimate on 14 August. Lower pink and coho salmon weir installed on 15 August. Lower pink and coho salmon weir removed on 24 September.
  - <sup>c</sup> Upper sockeye salmon weir removed on 29 July and 205 sockeye salmon included in the daily escapement as a post weir estimate. Lower pink and coho salmon weir installed on 15 August. Lower pink and coho salmon weir removed on 6 October.
  - <sup>d</sup> Includes an estimate of 100 sockeye salmon in the daily escapement due to high water on 21 July. Upper sockeye salmon weir removed on 27 July. Included 19 sockeye salmon as a post weir estimate on 28 July. Lower pink and coho salmon weir installed on 14 August. Lower pink and coho salmon weir removed on 29 September.
  - <sup>e</sup> Upper sockeye salmon weir removed on 6 July. Lower pink and coho salmon weir installed on 20 August. Lower pink and coho salmon weir removed on 4 October.
  - <sup>f</sup> Upper sockeye salmon weir removed on 27 July. Lower pink and coho salmon weir installed on 20 August. Lower pink and coho salmon weir removed on 4 October.
  - <sup>g</sup> Upper sockeye salmon weir removed on 25 July. Lower pink and coho salmon weir installed on 17 August. Lower pink and coho salmon weir removed on 29 September.
  - <sup>h</sup> Includes an estimate of 30 sockeye salmon in the daily escapement due to high water forcing a hole between two weir panels on 5 June. The upper sockeye salmon weir was removed on 8 August at 9:00 AM. The lower coho salmon weir was installed and fish tight on 12 August at 4:00 PM. Weir removed on 30 September.
  - <sup>i</sup> Included 5 sockeye salmon on 17 July as an estimate in the daily escapement due to a hole in the weir. Upper sockeye salmon weir removed on 16 August. Included an estimate of 67 sockeye salmon in the daily escapement while installing the Lower pink and coho salmon weir on 16 August. Included an estimate of 4 sockeye salmon in the daily escapement due to high water 29 August. Included an estimate of 11 sockeye salmon in the daily escapement due to high water 30 August. Included an estimate of 6 sockeye salmon in the daily escapement due to high water 31 August. Lower pink and coho salmon weir removed on 29 September.
  - <sup>j</sup> Refer to table 8.

**Table 60.**—Buskin daily cumulative escapement counts for coho salmon, 1995-2004.

**Table 60.**—(Page 3 of 3)

---

- <sup>a</sup> Upper Sockeye salmon weir removed on 31 July. Lower pink and coho salmon weir installed on 15 August. Weir removed due to high water on 5-9 September and coho escapements during this time period are estimates. Lower pink and coho salmon weir removed on 16 September. Included an estimate of 2,847 coho salmon on 30 September as a post weir estimate.
- <sup>b</sup> Upper sockeye salmon weir removed on 29 July. Lower pink and coho salmon weir installed on 15 August. Weir removed due to high water on 7-9 September and coho escapements during this time period are estimates. Weir removed due to high water on 13-19 September and coho escapements during this time period are estimates. Lower pink and coho salmon weir removed on 24 September. Coho escapements from 24-30 September are post weir estimates.
- <sup>c</sup> Upper sockeye salmon weir removed on 29 July. Lower pink and coho salmon weir installed on 15 August. Weir removed due to high water on 7-8 September. Coho salmon escapements during this time period include an estimate of 600 coho. Weir removed due to high water on 16 September and 500 coho included as an estimate. Weir removed due to high water on 21-25 September. Coho salmon escapements during this time frame are estimates. Lower pink and coho salmon weir removed on 6 October and the daily escapement includes an estimate of 22 coho salmon.
- <sup>d</sup> Upper sockeye salmon weir removed on 27 July. Lower pink and coho salmon weir installed on 14 August. Weir panels removed 31 August due to high water and estimate was zero. Weir panels removed due to high water on 2-3 September due to high water and the daily escapement includes an estimate of 500 coho salmon on 3 September. Weir panels removed on 10-11 September due to high water and each of these two days include an estimate of 400 coho salmon. Lower pink and coho salmon weir removed on 29 September.
- <sup>e</sup> Upper sockeye salmon weir removed on 6 July. Lower pink and coho salmon weir installed on 20 August. Weir panels removed due to high water 14 -24 September. Estimate 4,312 Coho escaped during this time period. Lower pink and coho salmon weir removed on 4 October.
- <sup>f</sup> Upper sockeye salmon weir removed on 27 July. Lower pink and coho salmon weir installed on 20 August. Lower pink and coho salmon weir removed on 4 October and the daily escapement includes a post weir estimate of 300 coho salmon.
- <sup>g</sup> Upper sockeye salmon weir removed on 25 July. Lower pink and coho salmon weir installed on 17 August. Includes an estimate of 9 coho salmon due to a scour hole on 8 September. Weir removed due to high water 16-18 September. Coho salmon escapements during this time period include an estimate of 900 coho salmon. Weir removed due to high water 21-24 September. Coho salmon escapements during this time period include an estimate of 2,011 coho salmon. Lower pink and coho salmon weir removed on 29 September.
- <sup>h</sup> Includes an estimate of 25 coho salmon in the daily escapement due to the counting gate being open by bear activity at the weir on 29 August. Includes an estimate of 25 coho salmon in the daily escapement due to a scour hole on 22 September. Weir removed on 30 September. Includes a post weir estimate of 31 coho on 30 September.
- <sup>i</sup> Upper sockeye salmon weir removed on 16 August. Lower pink and coho salmon weir installed on 16 August. Includes an estimate of 321 coho salmon in the daily escapement due to high water 29 August. Included an estimate of 272 coho salmon in the daily escapement due to high water 30 August. Included an estimate of 339 coho salmon in the daily escapement due to high water 31 August. Lower pink and coho salmon weir removed on 29 September.
- <sup>j</sup> Refer to Table 8.

**Table 61.**—Buskin daily cumulative escapement counts for pink salmon, 1995–2004.

- <sup>a</sup> Upper sockeye salmon weir removed on 31 July. Cumulative pink salmon escapement adjusted on 17 August to 57,000 based on an aerial survey estimate. Lower pink and coho salmon weir installed on 15 August. Weir removed due to high water on 5-9 September and estimate was zero for this time period. Lower pink and coho salmon weir removed on 16 September.
- <sup>b</sup> Upper sockeye salmon weir removed on 29 July. Cumulative pink salmon escapement adjusted on 14 August to 34,000 pink salmon based on an aerial survey estimate. Lower pink and coho salmon weir installed on 15 August. Weir removed due to high water on 7-9 September and estimate was zero during this time period. Weir removed due to high water on 13-19 September and estimate was zero during this time period. Lower pink and coho salmon weir removed on 24 September.
- <sup>c</sup> Upper sockeye salmon weir removed on 29 July and 336 pink salmon included in the daily escapement as a post weir estimate. Lower pink and coho salmon weir installed on 15 August. Cumulative pink salmon escapement adjusted on 14 August to 21,600 based on an aerial survey estimate. Lower pink and coho salmon weir removed on 6 October.
- <sup>d</sup> Upper sockeye salmon weir removed on 27 July. Lower pink and coho salmon weir installed on 14 August. Cumulative pink salmon escapement adjusted on 19 August to a cumulative of 85,245 pink salmon based on an aerial survey estimate. Weir panels removed on 2-3 September due to high water and estimate was zero during this time period. Weir washed out 10-11 September due to high water and estimate was zero during this time period. Lower pink and coho salmon weir removed on 29 September.
- <sup>e</sup> Upper sockeye salmon weir removed on 6 July. Lower pink and coho salmon weir installed on 20 August. Cumulative pink salmon escapement adjusted on 19 August to a cumulative of 45,376 pink salmon based on an aerial survey estimate. Lower pink and coho salmon weir removed on 4 October.
- <sup>f</sup> Upper sockeye salmon weir removed on 27 July. Cumulative pink salmon escapement adjusted on 19 August to a cumulative of 19,400 pink salmon based on an aerial survey estimate. Lower pink and coho salmon weir installed on 20 August. Lower pink and coho salmon weir removed on 4 October.
- <sup>g</sup> Upper sockeye salmon weir removed on 25 July. Lower pink and coho salmon weir installed on 17 August. Cumulative pink salmon escapement adjusted on 23 August to a cumulative of 31,982 based on an aerial survey estimate. Lower pink and coho salmon weir removed on 29 September.
- <sup>h</sup> Cumulative pink salmon escapement adjusted 13 August to a cumulative of 24,505 based on an aerial survey estimate. Includes an estimate of 250 pink salmon in the daily escapement due to the counting gate being open by bears on 29 August. Weir removed September 30.
- <sup>i</sup> Included 2 pink salmon on 17 July as an estimate in the daily escapement due to a hole in the weir. Upper sockeye salmon weir removed on 16 August. Included an estimate of 2,700 pink salmon in the daily escapement while installing the Lower pink and coho salmon weir on 16 August. Included an estimate of 982 pink salmon in the daily escapement due to high water 29 August. Included an estimate of 1,829 pink salmon in the daily escapement due to high water 30 August. Included an estimate of 1,080 pink salmon in the daily escapement due to high water 31 August. Lower pink and coho salmon weir removed on 29 September.
- <sup>j</sup> Refer to Table 8.

**Table 62.**—Buskin daily cumulative escapement counts for chum salmon, 1995-2004.

- <sup>a</sup> Upper sockeye salmon weir removed on 31 July. Lower pink and coho salmon weir installed on 15 August. Weir removed due to high water on 5-9 September. Lower pink and coho salmon weir removed on 16 September.
- <sup>b</sup> Upper sockeye salmon weir removed on 29 July. Lower pink and coho salmon weir installed on 15 August. Weir removed due to high water on 7-9 September. Weir removed due to high water on 13-19 September. Lower pink and coho salmon weir removed on 24 September.
- <sup>c</sup> Upper sockeye salmon weir removed on 29 July. Lower pink and coho salmon weir installed on 15 August. Weir removed due to high water on 7-8 September. Weir removed due to high water on 16 September. Weir removed due to high water on 21-25 September. Lower pink and coho salmon weir removed on 6 October.
- <sup>d</sup> Upper sockeye salmon weir removed on 27 July. Lower pink and coho salmon weir installed on 14 August. Weir removed due to high water on 31 September. Weir panels removed due to high water 2-3 September due to high water. Weir removed on 10-11 September due to high water. Lower pink and coho salmon weir removed on 29 September.
- <sup>e</sup> Upper sockeye salmon weir removed on 6 July. Lower pink and coho salmon weir installed on 20 August. Lower pink and coho salmon weir removed on 4 October.
- <sup>f</sup> Upper sockeye salmon weir removed on 27 July. Lower pink and coho salmon weir installed on 20 August. Lower pink and coho salmon weir removed on 4 October.
- <sup>g</sup> Upper sockeye salmon weir removed on 25 July. Lower pink and coho salmon weir installed on 17 August. Weir removed due to high water 16-18 September. Weir removed due to high water 21-24 September. Lower pink and coho salmon weir removed on 29 September.
- <sup>h</sup> Weir removed on 30 September.
- <sup>i</sup> Upper sockeye salmon weir removed on 16 August. Lower pink and coho salmon weir installed on 16 August. Lower pink and coho salmon weir removed on 29 September.
- <sup>j</sup> Refer to Table 8.

- <sup>a</sup> Upper sockeye salmon weir removed on 29 July. Lower pink and coho salmon weir installed on 15 August. Weir removed due to high water on 7-9 September. Weir removed due to high water on 13-19 September. Lower pink and coho salmon weir removed on 24 September.
- <sup>b</sup> Upper sockeye salmon weir removed on 29 July. Lower pink and coho salmon weir installed on 15 August. Weir removed due to high water on 7-8 September. Weir removed due to high water on 16 September. Weir removed due to high water on 21-25 September. Lower pink and coho salmon weir removed on 6 October.
- <sup>c</sup> Upper sockeye salmon weir removed on 27 July. Lower pink and coho salmon weir installed on 14 August. Weir removed due to high water 31 August. Weir removed due to high water on 2-3 September. Weir removed due to high water 10-11. Lower pink and coho salmon weir removed on 29 September.
- <sup>d</sup> Upper sockeye salmon weir removed on 6 July. Lower pink and coho salmon weir installed on 20 August. Lower pink and coho salmon weir removed on 4 October.
- <sup>e</sup> Upper sockeye salmon weir removed on 27 July. Lower pink and coho salmon weir installed on 20 August. Lower pink and coho salmon weir removed on 4 October.
- <sup>f</sup> Upper sockeye salmon weir removed on 25 July. Lower pink and coho salmon weir installed on 17 August. Weir removed due to high water 16-18 September. Weir removed due to high water 21-24 September. Lower pink and coho salmon weir removed on 29 September.
- <sup>g</sup> Upper sockeye salmon weir removed on 8 August. Weir removed due to high water on 5 June. Lower pink and coho salmon weir installed on 12 August. Weir removed on 30 September.
- <sup>h</sup> Upper sockeye salmon weir removed on 16 August. Lower pink and coho salmon weir installed on 16 August. Lower pink and coho salmon weir removed on 29 September.
- <sup>i</sup> Upper sockeye salmon weir removed on 30 July. Lower pink and coho salmon weir installed on 30 July. Lower pink and coho salmon weir removed on 30 September.

<sup>a</sup> Includes an estimate of 30 sockeye salmon in the daily escapement due to a hole in the weir created by bears on 31 July. Weir removed due to high water on 7-8 September. Daily escapement includes an estimate of two sockeye salmon on 8 September. Weir removed on 11 September and 100 sockeye salmon were included as a post weir estimate on 12 September.

<sup>b</sup> Includes an estimate of 128 sockeye salmon in the daily escapement due to a hole in the weir on 26 June. Includes an estimate of 100 sockeye salmon in the daily escapement due to a hole in the weir on 9 July. Weir removed on 11 September.

<sup>c</sup> Weir removed on 10 September.

<sup>d</sup> Includes an estimate of 100 sockeye salmon in the daily escapement due to a hole in the weir created by bears on 17 June. Includes an estimate of 200 sockeye salmon in the daily escapement due to a hole in the weir created by bears on 19 June. Includes an estimate of 100 sockeye salmon in the daily escapement due to a hole in the weir created by bears on 9 July. Weir removed on 9 September.

<sup>e</sup> Includes an estimate of 200 sockeye salmon in the daily escapement due to a hole in the weir created by bears on 18 July. Includes an estimate of 60 sockeye salmon in the daily escapement due to a hole in the weir created by bears on 20 July. Weir removed on 11 September.

<sup>f</sup> Includes an estimate of 150 sockeye salmon in the daily escapement due to a hole in the weir created by bears on 18 July. Weir removed on 11 September.

<sup>g</sup> Includes an estimate of 50 sockeye salmon in the daily escapement due to a hole in the weir on 12 June. Weir removed on 6 September.

<sup>h</sup> Weir removed on 24 August.

<sup>i</sup> Weir removed on 23 August.

<sup>j</sup> Refer to Table 10.

**Table 68.**—Litnik daily cumulative escapement counts for coho salmon, 1995-2004.

<sup>a</sup> Includes an estimate of two coho salmon in the daily escapement due to a hole in the weir created by bears on 31 July. Weir removed due to high water on 7-8 September. Daily escapement includes an estimate of 200 coho salmon on 7 September. Daily escapement includes an estimate of 300 coho salmon on 8 September. Weir removed on 11 September and 1,000 coho salmon included as a post weir estimate on 12 September.

<sup>b</sup> Weir removed on 11 September and 400 coho salmon included in the daily escapement as a post weir estimate.

<sup>c</sup> Weir removed on 10 September and coho salmon escapements 10-13 September are post weir estimates.

<sup>d</sup> Weir removed on 9 September and 2,000 coho salmon included in the daily escapement as a post weir estimate.

<sup>e</sup> Weir removed on 11 September and included 500 coho salmon as a post weir estimate on 12 September.

<sup>f</sup> Weir removed on 11 September.

<sup>g</sup> Weir removed on 6 September and 500 coho salmon included in the daily escapement as a post weir estimate on 6 September and 1,000 coho salmon included on 7 September.

<sup>h</sup> Weir removed on 24 August and included 3,000 coho salmon as a post weir estimate on 25 August.

<sup>i</sup> Weir removed 23 August and included 2,000 coho salmon as a post weir estimate on 23 August.

<sup>j</sup> Refer to Table 10.

**Table 69.**—Litnik daily cumulative escapement counts for pink salmon, 1995-2004.

-Footnotes on Next Page-

**Table 69.**—(Page 3 of 3)

---

- <sup>a</sup> Includes an estimate of 100 pink salmon in the daily escapement due to a hole in the weir created by bears on 31 July. Weir panels removed due to high water on 7-8 September. Daily escapement includes an estimate of 2,000 pink salmon on 8 September. Weir panels reinstalled on 9 September. Weir removed on 11 September. Included 10,000 pink salmon as a post weir estimate on 12 September.
- <sup>b</sup> Weir removed on 11 September.
- <sup>c</sup> Weir removed on 10 September. Escapements entered 10-13 September are post weir estimates.
- <sup>d</sup> Weir removed on 9 September and 2,000 pink salmon included in the daily escapement as a post weir estimate.
- <sup>e</sup> Weir removed on 11 September. Included 5,000 pink salmon as a post weir estimate on 12 September.
- <sup>f</sup> Weir removed on 11 September.
- <sup>g</sup> Weir removed on 6 September.
- <sup>h</sup> Weir removed on 24 August. Included 9,000 pink salmon as a post weir estimate on 25 August.
- <sup>i</sup> Weir removed on 23 August. Included 20,000 pink salmon as a post weir estimate on 23 August.
- <sup>j</sup> Refer to Table 10.

- <sup>a</sup> Weir removed on 7 September and 10 sockeye salmon included as a post weir estimate on 8 September.
- <sup>b</sup> Included an estimate of 150 sockeye salmon in the daily escapement on 3 July due to a hole in the weir on 2 July. Included an estimate of 20 sockeye salmon in the daily escapement due to a hole in the weir on 20 August. Weir removed on 11 September and 10 sockeye salmon included as a post weir estimate.
- <sup>c</sup> Weir removed on 28 August and one sockeye salmon included as a post weir estimate.
- <sup>d</sup> Weir removed on 11 September.
- <sup>e</sup> Included an estimate of 20 sockeye salmon in the daily escapement due to a hole in the weir created by bears on 7 July. Included an estimate of 300 sockeye salmon in the daily escapement due to a hole in the weir created by bears on 17 July. Weir removed on 10 September.
- <sup>f</sup> Weir removed on 17 September.
- <sup>g</sup> Weir removed on 5 September.
- <sup>h</sup> Weir removed on 11 September.
- <sup>i</sup> Weir removed 21 July.
- <sup>j</sup> Refer to table 13.
